PROFILE

Technical product and engineering lead with six years in software, four of them in telehealth commerce. Has product responsibility for Telegra's patient-facing commerce platform (white-labelled storefronts, checkout, subscriptions and patient dashboards) and leads the team of six engineers plus QA that builds it. Turns client and operational requirements into specifications and sprint plans, and reviews everything that ships. Previously Director of Technology at Invigor Medical, a telehealth e-commerce company. Came to software from laboratory science.

EXPERIENCE

2026 – present

Telegra

US telehealth platform for clinics and brands · Remote / Kennewick, WA, USA

Commerce Team Lead

- Led the build-out of Telegra Commerce, replacing reliance on a WooCommerce plugin with an end-to-end platform tracked from storefront to fulfilment; specified the renewals engine the team built.
- Led the one-page checkout from specification to release; review caught four release blockers, including a security issue.
- Turn client and operational requirements into specifications, acceptance criteria and sprint plans for a six-person engineering team based in India, plus QA; review and merge all code, and sit on hiring panels.
- Built a self-service tool to reprice and reissue invoices for closed billing periods, replacing manual corrections for clinic customers.
- Responsible for production: releases, incidents and data fixes.
- Set up the team's AI-assisted development workflow: specification-first tickets, and no merge until a person has reviewed the full change.

MERN (MongoDB · Express · React · Node.js) · TypeScript · Next.js · Redis · BullMQ · Stripe · AWS

Sep 2022 – Apr 2026

Invigor Medical

US telehealth e-commerce company

Director of Technology Jan 2024 – Apr 2026 · Pasco, WA, USA

- Primary technical owner across WooCommerce, Zoho CRM, EHR, e-prescribing and payment systems.
- Co-led the build of a React and Node.js prescription commerce platform integrating intake, payment and prescription routing.
- Built and maintained 15+ production automations for order routing, patient intake, billing triggers, subscription recovery and cross-system status sync.
- Implemented prescription routing by state, medication type and pharmacy capability.
- Designed delayed-capture payments so patients were charged only after a clinician approved the order, running Stripe and Authorize.Net side by side for resilience.
- Delivered executive reporting on revenue, cancellations and fulfilment.

Zoho (Deluge, Flow) · WooCommerce · WordPress · React · Node.js · Stripe · Authorize.Net · Segment · Metorik

Full Stack Developer Sep 2022 – Jan 2024 · Kennewick, WA, USA

Automated operations in Zoho Deluge; built a React/Node patient dashboard.

Oct 2020 – Dec 2021

Pathwright

US online learning platform · Remote

Full Stack Developer (contract)

Contract developer: built a hypertext parser and rich-text editor in React, TypeScript and Slate.js, and prototyped features for the product team.

Jun 2020

Lambda School

US coding bootcamp · Remote

Section Lead

Mentored eleven team leads, each supporting 5–12 students.

Aug 2017 – Sep 2019

Earlier career

Microbiologist, Tyson Foods (Sep 2018 – Sep 2019); Research Assistant, Santa Cruz Biotechnology (Aug 2017 – Aug 2018).

EDUCATION

2016 — BSc Biochemistry, Brigham Young University–Idaho (US)

Oct 2019 – 2020 — Lambda School (US coding bootcamp), full-stack web development

SKILLS

Product & delivery — Specification writing, acceptance criteria, roadmap planning, prioritisation, sprint planning, release management, stakeholder management, incident management

Payments & integrations — Stripe, Authorize.Net, EHR and e-prescribing, webhooks, REST APIs

Engineering — TypeScript, JavaScript, React, Next.js, Node.js, Express, MongoDB, Redis, AWS, code review, AI-assisted development (Claude Code)
